HEATING and SANITARY Heating network Satellite stations
Plumbing: Customer choice Rainwater system Pluvia

New construction of 38 + 57 flats, commercial spaces, offices and a day nursery

- Builder: Triple Living / Architect: Poponcini & Lootens ir.
Architects / Engineering office: VK Architects & Engineers
- Techniques: HVAC and SANITARY

Heat production in both buildings is provided by means of an urban network managed centrally by Fluvius.

In each building, a central heat exchanger is provided by Fluvius to which we make a secondary connection.

A combi boiler feeds individual residential stations in the flats. The residential stations are responsible for the central heating production of radiators and underfloor heating and, on the other hand, for the production of domestic hot water.

Plumbing with individual customer selections
Pluvia rainwater system
